## About OpenTracker

OpenTracker is a European GPS security app that transforms every iPhone into a mobile safety hub. With features like Guardian Angel and Live Tracking, the app protects people who travel alone – whether hiking, on business trips, or in everyday life. For businesses, OpenTracker offers a cost-effective fleet solution: every smartphone becomes a GPS tracker, without expensive hardware or subscription traps. All data stays local on the device; users decide if and where their data is transmitted. OpenTracker is a brand of XIERRA® / Desteba Productions, S.L., based in Alicante, Spain.
